

Acupuncturist in Kitchener

Acupuncturist in Kitchener - IV therapy or also known as Intravenous therapy is the placing of substances straight into a vein. IV therapy has been used in order to correct electrolyte imbalances and to deliver medications in blood transfusions. It can even be utilized as fluid replacement to correct, for example, dehydration. The intravenous route is the fastest way to deliver fluids and medications all through the body. Several medications, along with blood transfusions and lethal injections, can only be given intravenously.

Vitamin C Intravenous therapy is another remedy utilized conditions like cancer. A lot of centers dedicate particular treatment regimens, even though there is still some controversy around this form of remedy. Some of the reputed effects of Vitamin C therapy include: prolonging survival and increasing the quality of life. Vitamin C is helpful in preventing systemic free radical injury and corrects a lack of ascorbic acid, which is normally found in individuals who suffer from cancer. Vitamin C inhibits hyaluronidase. This is actually an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in tumor progression and metastasis. Vitamin C also works synergistically conventional with different traditional cancer treatments.

Vitamin C, likewise called L-ascorbate or L-ascorbic acid is a very vital nutrient for humans and many other animals. It acts as an antioxidant and protects the body against oxidative stress. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions comprising different collagen synthesis reactions which cause the most severe signs of scurvy when they are not working correctly. In animals, these enzyme reactions are very vital in preventing bleeding from capillaries and wound-healing.

Vitamin C Mega Dosage

There are some organizations and people who support large doses of Vitamin C, more than ten to one hundred times over the Recommended Daily Intake or RDI. They take these amounts either intravenous therapy or orally. There have yet to be randomized, large clinical trials on the circumstances of high doses performed on the general people. Linus Pauling spent a large portion of his life advocating the use of mega doses of vitamin C. He believed the established RDA was enough to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C has been and continues to be used to be able to treat and prevent a lot of different conditions, among which comprise cancer, coronary disease and the common cold. Current recommendations for Vitamin C are anywhere from 30 - 100 mg each and every day. Individuals taking a mega dose may ingest anywhere from 500mg to 1000 mg a day but the side effect of diarrhoea may be a common problem for those who ingest large amounts.
