

Legal Aid Lawyers in Prince George

Legal Aid Lawyers in Prince George - The emerging world of energy and energy markets is the specialty of our company's energy law firm. There are numerous new opportunities and challenges. Our company has a team of legal professionals with the knowledge and experience to help clients in taking advantage of this new world. Our energy law group provides a comprehensive array of legal services to international and local energy clients. We serve everyone from start-up businesses to major corporations. Whether your company offers solar energy technology or more traditional kinds of energy generation, both have difficult transactional needs. We provide practical and sound representation and suggestion drawing on a depth of knowledge of the economic, political and legal issues involved in energy concerns.

1. We help with new developments connected to renewable/alternative energy technologies (e.g., solar, wind, fuel cells, biofuels, biomass, geothermal and hydropower). In the case of the solar energy trade, we act for users, developers and manufacturers in preparation of land and roof release, tax matters, development agreements, financing agreements with investors, regulatory and legislative issues, and commercial arrangements;
2. We are involved in energy efficiency demand management and cogeneration projects in industrial, institutional and commercial contexts, comprising financing, engineering, and construction concerns;
3. In respect of new statutory requirements to complete energy plans and their integration of land use, we provide suggestion to private and public entities;
4. For energy projects we help to negotiate and structure project financing, joint venture arrangements, acquisition and transfer and licensing arrangements;
5. In the initial stages of financing and commercialization of clean technologies, we could offer various services to help;
6. With new energy and environmental law requirements including carbon management and disclosure, we can help with compliance and approvals;
7. We assist to protect, commercialize and create intellectual property rights;
8. We are involved in venture capital opportunities, along with private equity and initial public offering opportunities;
9. For concerns like for instance "leave to construct" applications for both gas and electricity infrastructure, we could represent clients at hearings before regulatory commissions and agencies, licensing, setting of rates, creation of independent transmission businesses, approvals, compliance matters and permitting
10. We counsel board of directors and senior management about problems of corporate governance and disclosure, environmental stewardship and liability issues, climate change, evolving regulatory concerns, and, where appropriate, helping in representations to governments.
